Question:Â

Suppose my program controls Microsoft Word to do a Mail Merge. How do I do this with isCOBOL?

Answer:Â

To control Microsoft Word or to perform OLE automation, isCOBOL requires a third-party product that allows Java applications to be integrated with COM/OLE/OCX/ActiveX libraries, and exposes Java objects as COM objects.

There are a number of free products available that do this. We have testedÂ [ComfyJ](http://support.veryant.com/support/phpkb/question.php?ID=2), a commercial product without runtime licensing fees.

There are many other products available, including :Â
