How to write custom information inside isCOBOL log file

Author: Veryant Support

isCOBOL supports a library routine named "C$WRITELOG".
 This routine will add custom information to an isCOBOL log file.
 When running with the configuration iscobol.tracelevel set to a value greater than 0, the parameter that is sent to C$WRITELOG will be written in the log file.

Code example:

```
    string "before apply-discount, w-price=" w-price into logline
    perform CALL-WRITELOG
CALL-WRITELOG.
    call "C$WRITELOG" using logline
    initialize logline
```

These are some lines of isCOBOL logfile created with iscobol.tracelevel=15:

```
 Info: ENTER PARAGRAPH ';CALL-WRITELOG'; [MYPROG]
 Info: before apply-discount, w-price= 0000061.31
 Info: EXIT PARAGRAPH ';CALL-WRITELOG'; [MYPROG]
 Info: ENTER PARAGRAPH ';APPLY-DISCOUNT'; [MYPROG]
 Info: EXIT PARAGRAPH ';APPLY-DISCOUNT'; [MYPROG]
 Info: ENTER PARAGRAPH ';CALL-WRITELOG'; [MYPROG]
 Info: after apply-discount, w-price= 0000055.17
 Info: EXIT PARAGRAPH ';CALL-WRITELOG'; [MYPROG]
 Info: EXIT PROGRAM ';MYPROG'; }
```
