## Question:

The icon in the upper left corner of the Window is a blue circle containing the letters "is". How can I replace this with my own icon?

## Answer:

If you want to display the Java icon instead of the isCOBOL icon, you can set `iscobol.gui.icon` to `false`.

To replace the default window icon with your own, set this variable in your configuration file:

```
iscobol.gui.icon_file=[path and name of new icon file]
```

You can change the icon on a specific window by using the "ICON" syntax in the DISPLAY WINDOW statement.

You pass a bitmap handle returned by calling `W$BITMAP` using `whbitmap-load`.

You can also customize the icon that displays in the system tray with `W$MENU's WMENUNEW-TRAY`.
