isCOBOL Customer Experience

Ron Turley Associates

RTA introduction

- Fleet Management software solution provider since 1982
- COBOL history
 - Originally RM/Cobol shop
 - Moved to ACUCOBOL-GT (1987)
- Migrated to windows (from text) platform in the 90's and added GUI capabilities

isCOBOL appeal

- Improve features
 - We wanted windows features that we were seeing in other standard products
- Expand markets
 - We wanted to move our product to be an international product with multiple language support
- Improve product “image”
 - We wanted to stop answering “the COBOL question”
- Add product capabilities
 - We wanted to more easily add features and interfaces to other products and devices in the marketplace.

Issues considered

- Staff skills
 - Learning curve, support, and data
 - New distribution methods
- End-user satisfaction
 - Upgrade impact and learning curve
- Migration timeframe
- Technical details
 - File system choices
 - 3rd Party tool issues
- Unsupported features or changed features

Migration process

- Baby steps first
 - Small steps taken first to gain familiarity with the conversion process and platform
 - Addressed look and feel first to get a basic working product before handling other areas
- Special attention
 - Display alignment
 - ActiveX
 - 3rd Party applications
 - Data conversions and database selection

Demonstration

Status

- Migration near completion
 - ~4 man month project to date; 1 month to go
 - Re-coded a few features
 - Threading, resource files, ActiveX to JavaBean
- Outstanding items
 - 3rd party product
 - Training support staff
- Customer rollout
 - Summer 2009 - 1200 implementations
 - Net new sales with isCOBOL – Q309

Was it worth it?

Definitely!

- Timely and effective support from Veryant team
- High compatibility, <1% code change required
- Lots of bang for our buck
 - Can now add high impact features with little coding effort
- Opens door to international markets
- “Modernized” our language without changing our language...

Moving to isCOBOL

Areas to address

Moving to isCOBOL APS

- Compilation
- Library and External Routines
- Application Environment
- Data Sources
- User Interface
- Interoperability

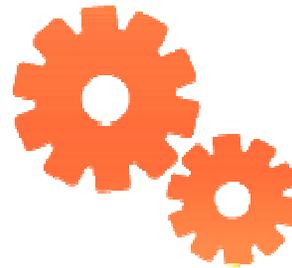

Transitioning to isCOBOL is similar to a COBOL upgrade

isCOBOL-to-Java process

Develop

Current
COBOL programs
and practices

Compile

COBOL compiled to
pure Java source;
JDK compiles output

Deploy

100% Java
output (byte
code objects)

Leverages current COBOL programs; outputs pure Java code

Compilation

Moving to isCOBOL APS

- Majority of code typically requires only recompilation
- Areas to address:
 - Compile options/directives
 - Example: -sp
 - Language syntax (coding)
 - Programming semantics (behavior)

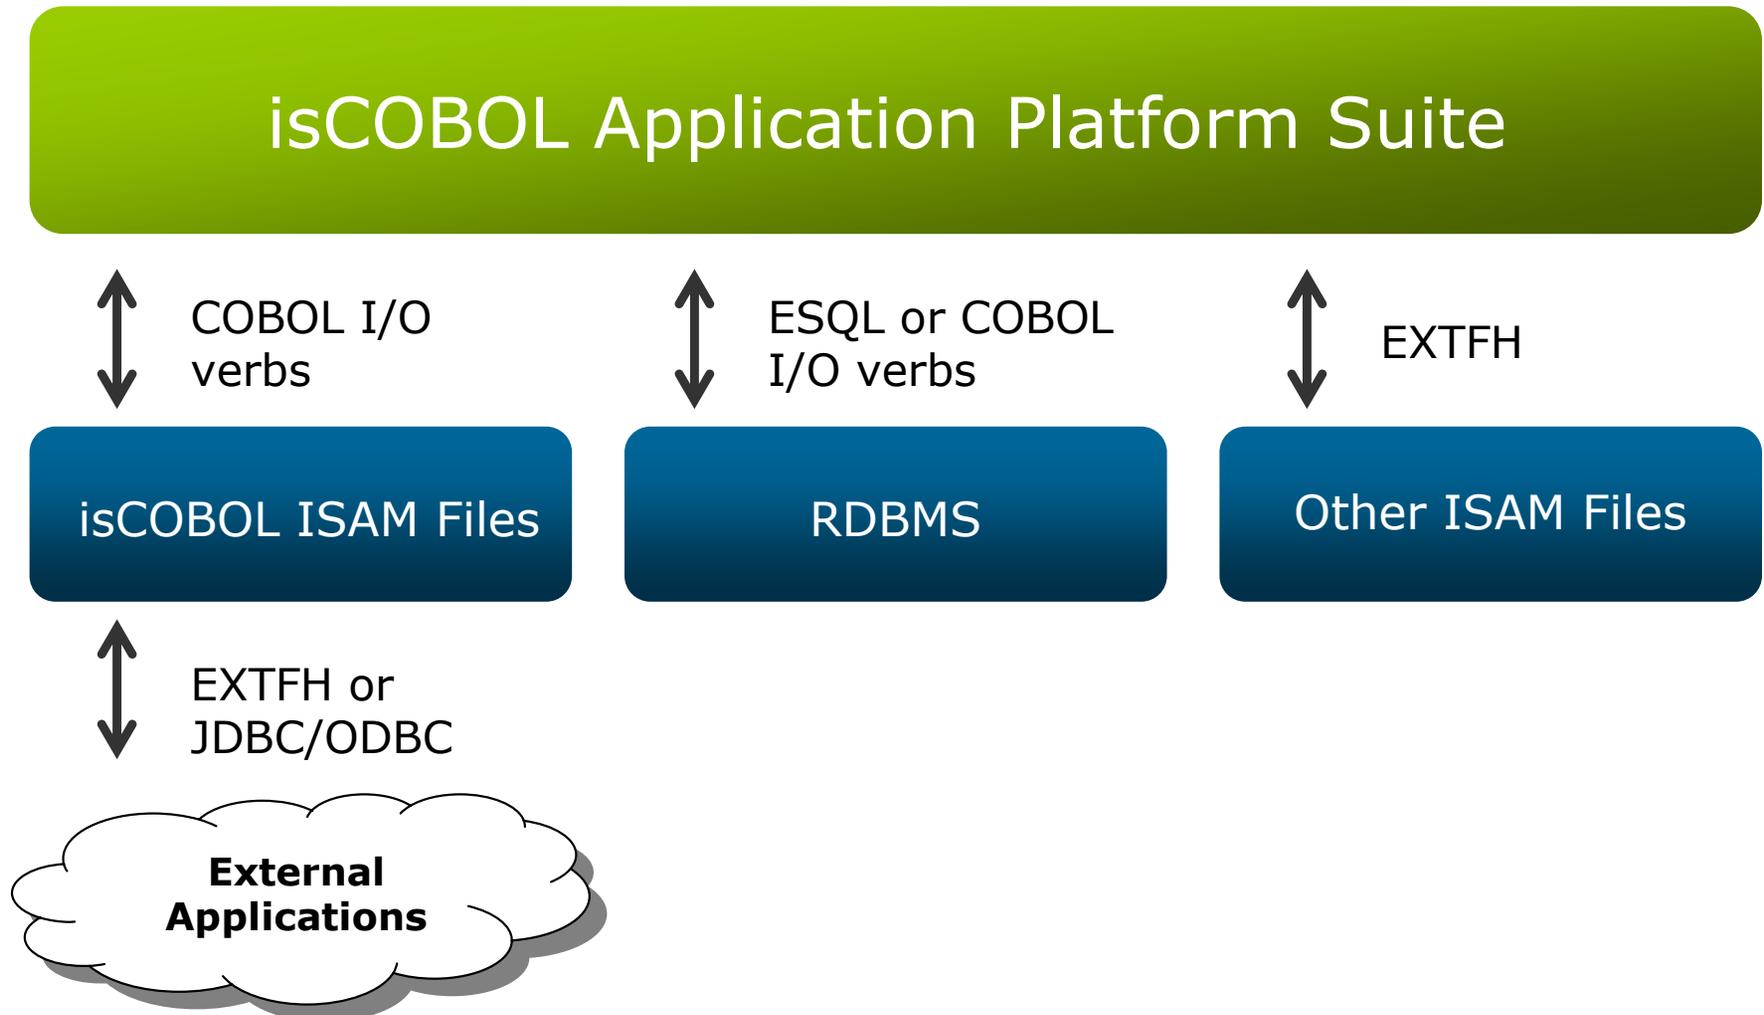

Library and external routines

- isCOBOL implements common library and external routines
 - C\$, W\$, CBL_, etc.
 - SYSTEM, C\$SYSTEM
 - C language routines
- Library routines yet to be implemented:
 - Implement in COBOL or Java
 - Find equivalent Java routine
 - Identify alternative method
- Example
 - C\$XML – JDOM

Application environment

- Runtime configuration and environment variables
- Program launch
 - Shell scripts, batch files, shortcuts
- Deployment architecture
 - Local vs. Thin Client
 - User Login/access control
 - Interfacing with other applications
- Example
 - ISCONFIG

Data sources

User interface

Moving to isCOBOL APS

- Transition smoothly:
 - Character-based screens (green screens)
 - GUI screen section and procedure division
 - External custom user interface libraries
- Areas to address:
 - ActiveX
 - MF Dialog, RM-Panels
 - COBOL-WOW

With isCOBOL, the same GUI runs on all supported platforms

Dialog System overview

The COBOL Group

- Dialog System (Dialog) is a powerful GUI with rich instruction set
- Drawbacks
 - Difficult to maintain
 - Lack of available talent
 - Antiquated user interface
- Migration challenges
 - Tight integration between Dialog procedures and calling program rules
 - Restrictive cross-platform portability
 - Extensive proprietary code
 - Programming style issues

Dialog procedures

Interoperability

- Accessing COBOL data externally
 - isCOBOL ISAM ODBC
 - EXTFH
- Calling COBOL from C, Java, etc.
- Web interfaces
 - CGI, Servlets
- Web services/SOA
- COM, ActiveX, .NET

Transition resources

- isCOBOL Compiler
- isCOBOL IDE
 - Real-time syntax checking
- Environment
 - ISCONFIG
- Data
 - ISMIGRATE
 - JUTIL and ctutil
- Veryant expertise
 - Application survey form and follow-up discussion

Next steps?

- 1:1 technical briefing
- Technical survey
- Representative prototype
- Code analysis report
- Proof of concept
